

Health & Safety Briefing

The fingerprinting experience is a very low risk activity. We recommend informing guests they are participating at their own risk before the session starts, and to not participate if they have any concerns.

Guests are required to provide their own mask.

1. Please ensure you/guests always wear a mask when using fingerprint powder, avoid contact with eyes (and wash immediately if irritation occurs).
2. The fingerprint powder has been risk-assessed and the risk factors are incredibly low. Always wash your hands after using the fingerprint ink and powder.
3. We recommend using a surface cover as the powder can become messy. It does clean off with cleaning products, or detergent if contact with most fabrics.

If you/guests have respiratory allergies, we recommend you/they do not participate in the dusting for fingerprint activity. Please note, all activities are participated in, at your/guests own risk. The Crime Lab will not be held responsible for any damage or injuries caused whilst participating in the event.

Included in the digital folder for this experience you will find the risk assessment and COSHH information.

If you have any questions at all, please feel free to reach out to The Crime Team by emailing team@thecrimelab.co.uk
